

# Microbiate SG™

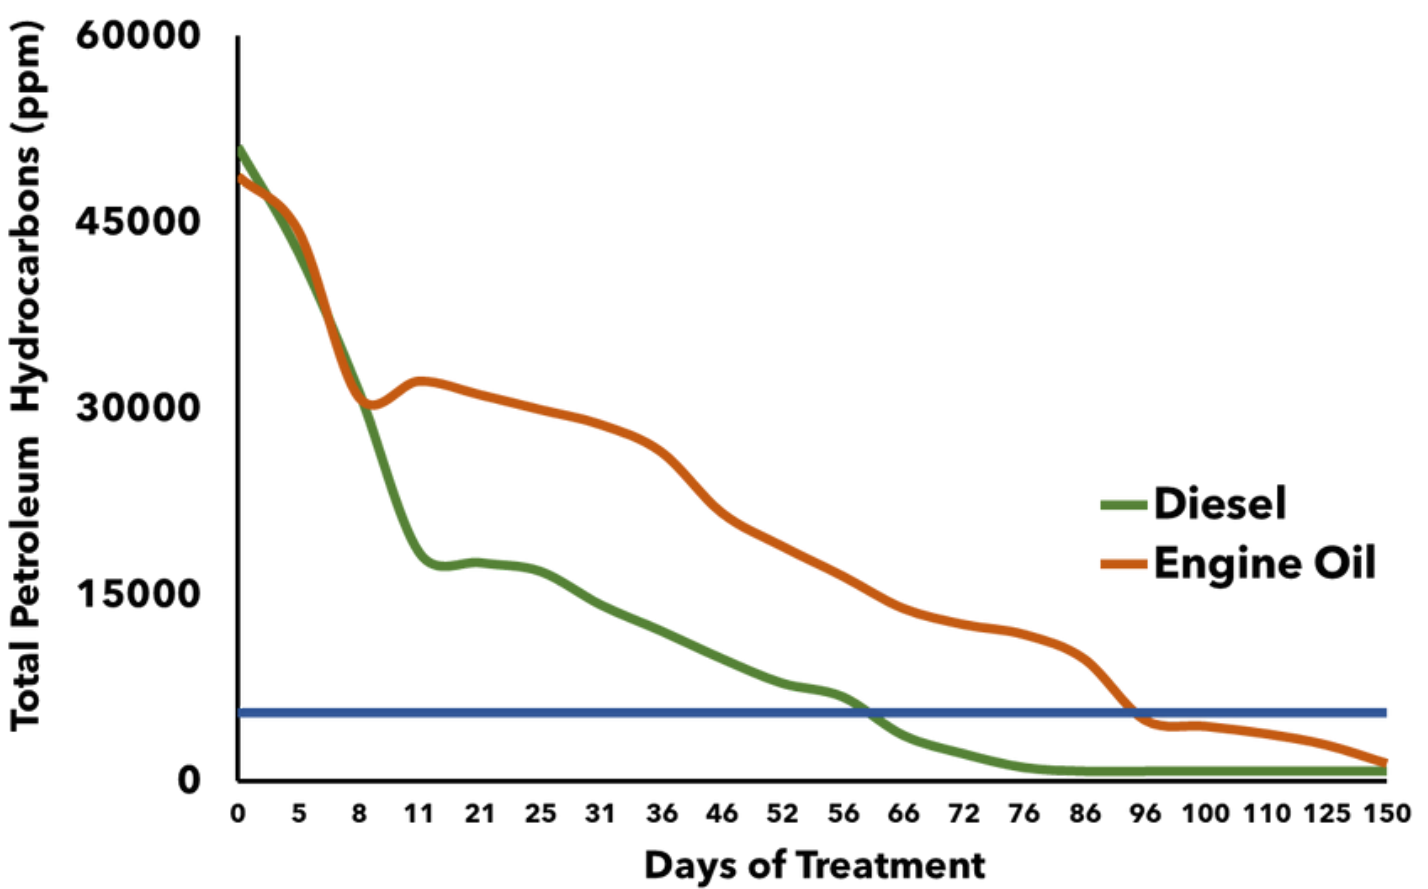

## Hydrocarbon Bioremediation

Microbiate SG™ is an environmentally friendly, low-cost, and natural product that returns soil back to a usable state. It remediates oil spills rather than simply relocating them.

Microbiate SG™ is available in a range of product sizes to suit your remediation needs, from individual spill kits to industrial bulk purchasing options.

### Degradation of Hydrocarbons

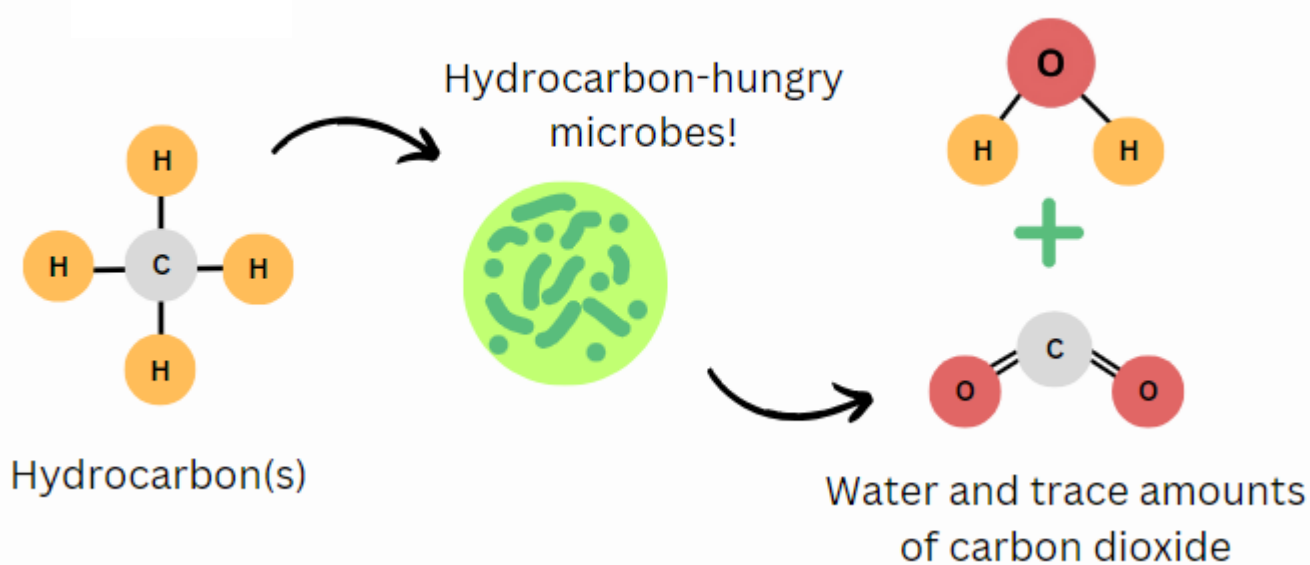

- Microbiate SG™ contains 6 strains of microbes harvested from Northwestern Ontario soils
- Cold-adapted microbes have the lowest and widest operating temperature range of microbes on the market (0.01° C to 49° C)
- Require 30% less moisture to activate
- Significant savings over traditional 'dig and dump'

# ***Microbiate SG™ is an environmentally friendly solution to soil contamination.***

Microbiate SG™ breaks down hydrocarbons to form trace amounts of carbon dioxide and water. An activator (nutrient pack) is included, adding nutrients at key times to accelerate the bioremediation process.

## ***On a molecular level:***

Microbiate SG™ cleans spills, rather than simply relocating them.

Our team work closely with our clients, providing a tailored remediation strategy.

We will review your project parameters to determine suitability, free of charge.

We lead with science to offer a sustainable method that will benefit your ESG strategy.
