

Microbiate™ HS

Hydrocarbon Bioremediation

Product

Microbiate™ HS is an environmentally friendly, low cost, all-natural proprietary microbial formulation that digests gasoline, fuel, oil, other hydrocarbons, and other organic contaminants on hard surfaces. The formulation is more aggressive, more consistent, and more efficient than any other product on the market. The microbes work in the widest temperature range and on multiple hard surfaces.

Remediate spills and return your hard surfaces back to their original state with Microbiate™ HS.

Benefits

- Absorbs spills quickly.
- Cold climate adapted; Microbiate™ HS offers the lowest operating temperature rating on the market (0°C).
- Active remediation upon application and works at the highest temperature range on the market (49°C).
- Does not require moisture to activate the microbes.
- Proprietary manufacturing methods eliminate impurities, ensuring the microbes are highly effective and will propagate rapidly.
- Comes in three sizes to suit specific remediation needs – large, medium, and small individual, emergency spills kits.
- Lightweight product. Decreases shipping costs and manual handling requirements. It's safe for your staff and significantly reduces muscle and back strain.
- Simple clean up. Doesn't stick to shoes or clothing. Reduces ancillary clean up requirements common with competing products.
- Environmentally friendly and biodegradable.

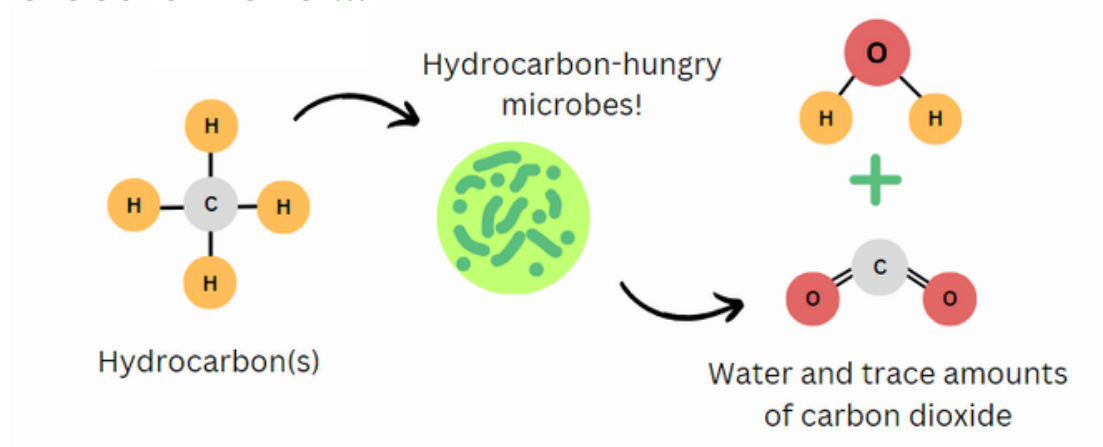

How It Works

Microbate™ HS has 8 times the absorbency of similar granular spill cleanup products. When applied as directed, Microbate™ HS will absorb oil and leave behind minimal residue, ensuring a complete spill cleanup.

On a molecular level...

BNS Approach

Microbate™ HS cleans spills on all of your hard surfaces. Our team work closely with our clients and can provide tailored hard surface remediation strategies for you. We will review your specific requirements to determine your specific formulation needs, free of charge. We lead with science to offer a sustainable method that will benefit your ESG strategy.
